

Storm Data and Unusual Weather Phenomena - June 2007

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

ALABAMA, Central

(AL-Z011) MARION, (AL-Z012) LAMAR, (AL-Z013) FAYETTE, (AL-Z014) WINSTON, (AL-Z015) WALKER, (AL-Z017) BLOUNT, (AL-Z018) ETOWAH, (AL-Z019) CALHOUN, (AL-Z020) CHEROKEE, (AL-Z021) CLEBURNE, (AL-Z022) PICKENS, (AL-Z023) TUSCALOOSA, (AL-Z024) JEFFERSON, (AL-Z025) SHELBY, (AL-Z026) ST. CLAIR, (AL-Z027) TALLADEGA, (AL-Z028) CLAY, (AL-Z029) RANDOLPH, (AL-Z030) SUMTER, (AL-Z031) GREENE, (AL-Z032) HALE, (AL-Z033) PERRY, (AL-Z034) BIBB, (AL-Z035) CHILTON, (AL-Z036) COOSA, (AL-Z037) TALLAPOOSA, (AL-Z038) CHAMBERS, (AL-Z039) MARENGO, (AL-Z040) DALLAS, (AL-Z041) AUTAUGA, (AL-Z042) LOWNDES, (AL-Z043) ELMORE, (AL-Z044) MONTGOMERY, (AL-Z045) MACON, (AL-Z047) LEE, (AL-Z048) RUSSELL

	06/01/07 00:00 CST		0	Drought
	06/30/07 23:59 CST		0	

Below normal rainfall (generally one to three inches) across Central Alabama through the month of June exacerbated the ongoing drought conditions. By the end of the month, all or portions of 24 Central Alabama counties were placed in the Exceptional (D4) Drought category. This area was generally from the cities Demopolis, Clanton, Ashland, and Heflin, northward. Most of the remainder of Central Alabama experienced Extreme (D3) Drought conditions as June drew to a close.

Hydrologic and agricultural impacts were widely felt. Crops became highly stressed due to the lack of rainfall, with losses by the end of the month ranging from 50 to nearly 100 percent in some Central Alabama counties. Stream flows on area rivers and waterways remained near record low levels, and most reservoir levels were well below normal. The number of mandatory water restrictions continued to increase, with fines and surcharges being enforced for excessive water usage. Many residential lawns, shrubbery, and gardens became severely stressed by the very dry conditions.

(AL-Z046) BULLOCK, (AL-Z049) PIKE, (AL-Z050) BARBOUR

	06/05/07 06:00 CST		0	Drought
	06/30/07 23:59 CST		0	

The severe (D2) and Extreme (D3) drought conditions that first developed in the north half of Alabama earlier in the Spring finally spread into the southern third of the state, including the Troy, Clayton, and Eufaula areas. Hydrologic and agricultural impacts were widely felt. By the end of the month, officials in Barbour County reported a near total loss of the corn crop, and similar impacts were felt in other areas as well.

CHAMBERS COUNTY --- PENTON [33.00, -85.45]

	06/05/07 12:00 CST		0	Hail (0.88 in)
	06/05/07 12:00 CST		0	Source: Emergency Manager

Afternoon heating caused an isolated severe thunderstorm.

Afternoon heating lead to several severe thunderstorms across portions of Central Alabama.

ALABAMA, North

(AL-Z001) LAUDERDALE, (AL-Z002) COLBERT, (AL-Z003) FRANKLIN, (AL-Z004) LAWRENCE, (AL-Z005) LIMESTONE, (AL-Z006) MADISON, (AL-Z007) MORGAN, (AL-Z008) MARSHALL, (AL-Z009) JACKSON, (AL-Z010) DEKALB, (AL-Z016) CULLMAN				
	06/01/07 00:00 CST		0	Drought
	06/01/07 23:59 CST		0	

Rainfall deficits continued to grow in June, with only spotty and mainly light rain experienced throughout the month. A pattern change toward the end of the month brought spotty short-term relief to a few, but on a long-term basis, the historic drought continued. The Drought Monitor downgraded nearly all of north Alabama, except for the far northwest corner, from the D3 (Extreme) to D4 (Exceptional) drought category.

COLBERT COUNTY --- SHEFFIELD [34.77, -87.70]				
	06/08/07 13:43 CST		0	Thunderstorm Wind (EG 52 kt)

Storm Data and Unusual Weather Phenomena - June 2007

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>Representatives from the National Weather Service and Morgan County Emergency Management completed a survey of damage in the city of Trinity, AL. The survey found evidence of an EF-0 tornado on the Enhanced Fujita scale, with highest winds of 65 mph. The damage was confined mostly to uprooted trees and snapped limbs. One residence sustained some damage, mainly to sheds and fencing at the back of the property.</p> <p>An upper level circulation or disturbance known in meteorology as a Mesoscale-Convective-Vorticity center tracked eastward through the central Tennessee Valley during the morning hours. A moist an unstable airmass enabled rapid low-topped shower development by late morning as this system tracked through the area. A brief weak tornado was sighted in Trinity. This was in close proximity to the upper level circulation mentioned above. As this shower entered Madison, AL further to the east, a NWS employee observed thunder being heard, likely from a cloud to cloud lightning flash. Otherwise, no other cloud to ground lightning was noted, making this tornado an interesting phenomenon for further study. The University of Alabama-Huntsville ARMOR dual-polarization radar located at the Huntsville International Airport was in close proximity to this tornado and identified a couple of small low-level circulations within a band these showers, one in the vicinity of the tornado.</p>
